

SPECIFICATIONS

1. Specifications

1-1. General Specification

Product Name	Horn Type Annunciator		
Model	EHV-M1		
Rated Voltage	DC12 V-DC24 V		
Operating Voltage Range	DC10.8 V-DC35 V		
Rated Current Consumption	Max.	480 mA	
Rated Power Consumption (for NPN/No-voltage)	Typ.	4.0 W (at DC12 V)	
	Conditions	Volume at maximum and a 1 kHz at -6 dB sine wave played back	
	Max.	5.8 W (at DC12 V)	
	Conditions	At maximum volume and "Rapid Hi-Lo" alarm playback	
Rated Power Consumption (for PNP/Voltage Input)	Typ.	5.0 W (at DC12 V)	
	Conditions	Volume at maximum and a 1 kHz at -6 dB sine wave played back	
	Max.	8.0 W (at DC31.6 V)	
	Conditions	At maximum volume and "Rapid Hi-Lo" alarm playback	
Inrush Current	4 A or less (at DC12 V)		
	9 A or less (at DC24 V)		
	12.5 A or less (at DC35 V)		
Operating Ambient Temperature	-20 °C to +50 °C		
Operating Ambient Humidity	Less than 85 % (No condensation)		
Storage Ambient Temperature	-30 °C to +60 °C		
Storage Ambient Humidity	Less than 85 % (No condensation)		
Mounting Location	Indoors/Outdoors		
Mounting Direction	Upright	Sideways	Upside-down
			
Protection Rating	IP65 (IEC 60529)		
Environmental Condition	Upright Installation		
Insulation Resistance	More than 1MΩ at 500VDC between live part and non-current carrying metallic part		
Withstand Voltage	500VAC applied for 1min between live part and non-current carrying metallic part without breaking insulation		
Vibration Resistance	45.0m/s ² IEC 60068-2-6:2007 (Upright Position)		
Impact Resistance	250 m/s ² 6 ms for 1,000 times (3 axis 1 direction); 500 m/s ² 11 ms for 3 times (3 axis both directions) IEC 60068-2-27:2008 (Upright Position)		
Mass (Tolerance ±10%)	1.25 kg		
Sound Pressure Level(Alarm)	Maximum: 110 dB		
	Environmental Condition	Upright position from horn opening at a distance of 1 m. Volume at maximum and "Stutter" alarm played.	
Sound Pressure Level(Mp3)	Maximum: 105 dB		
	Environmental Conditions	Volume at maximum and a 1kHz at -6dB sine wave played back from the horn opening.	
Outer Dimensions	Refer to 6. Outer Dimension Drawing		
Conformity Standards	EMC Directive (EN 61000-6-4, EN 61000-6-2)		
	RoHS Directive (EN IEC 63000)		
	UL 464, CSA-C22.2 No. 205		
	FCC Part15 SubpartB Class A		
	KC (KN35, KN32)		
Remarks	UL Listed (File No.S24210) Conforms to the CE Requirements Conforms to the UKCA Requirements		

Drawing No.	Rev.	Page
EHV-W18	H	2/19

Product Name		Horn Type Annunciator		
Model		EHV-M2		
Rated Voltage		AC100 V-AC240 V (50/60 Hz)		
Operating Voltage Range		AC90 V-AC264 V (50/60 Hz)		
Rated Current Consumption	Max.	150 mA		
Rated Power Consumption (for NPN/No-voltage)	Typ.	5.3 W (at AC240 V)		
	Conditions	Volume at maximum and a 1 kHz at -6 dB sine wave played back		
	Max.	7.9 W (at AC264 V)		
	Conditions	At maximum volume and "Rapid Hi-Lo" alarm playback		
Inrush Current		6 A or less (at AC100 V)		
		15 A or less (at AC240 V)		
		23 A or less (at AC264 V)		
Operating Ambient Temperature		-20 °C to +50 °C		
Operating Ambient Humidity		Less than 85 % (No condensation)		
Storage Ambient Temperature		-30 °C to +60 °C		
Storage Ambient Humidity		Less than 85 % (No condensation)		
Mounting Location		Indoors/Outdoors		
Mounting Direction	Upright	Sideways		Upside-down
				
Protection Rating		IP65 (IEC 60529)		
Environmental Condition		Upright Installation		
Insulation Resistance		More than 1MΩ at 500VDC between live part and non-current carrying metallic part		
Withstand Voltage		1500VAC applied for 1min between live part and non-current carrying metallic part without breaking insulation		
Vibration Resistance		45.0m/s ² IEC 60068-2-6:2007 (Upright Position)		
Impact Resistance		250 m/s ² 6 ms for 1,000 times (3 axis 1 direction); 500 m/s ² 11 ms for 3 times (3 axis both directions) IEC 60068-2-27:2008 (Upright Position)		
Mass (Tolerance ±10%)		1.25 kg		
Sound Pressure Level(Alarm)		Maximum: 110 dB		
Environmental Condition		Upright position from horn opening at a distance of 1 m. Volume at maximum and "Stutter" alarm played.		
Sound Pressure Level(MP3)		Maximum: 105 dB		
Environmental Conditions		Volume at maximum and a 1 kHz at -6 dB sine wave played back from the horn opening.		
Outer Dimensions		Refer to 6. Outer Dimension Drawing		
Conformity Standards		UL 464, CSA-C22.2 No. 205 FCC Part15 Subpart B Class A KC (KN35, KN32)		
Remarks		UL Listed (File No.S24210) There are no contents of controlled substances exceeding the threshold for the RoHS Directive.		

1-2. Performance Specifications

MP3 Mode Switch Condition	MP3 setting ON	MP3 setting OFF
Volume Control	Volume Adjustable: Min. - Max.	
	Sound Reduction Input: It is a value specified as a reduction from the currently adjusted volume. (None, -10 dB, -20 dB, -30 dB selection)	-
Sound Playback	MP3 data / Alarm/Melody (Standard)	Alarm/Melody (Standard)
Number of Playback Channels	Bit Input: 8/binary input: 63	
Alarm/Melody	7. Sound List Reference	
Playback Mode	normal playback / input priority playback / hold playback / memory playback	Hold Playback
	Mode Switch (DIPSW) Selection Possible.	
Playback start-up time	300 ms or less (Signal Input and Power Supply Startup)	

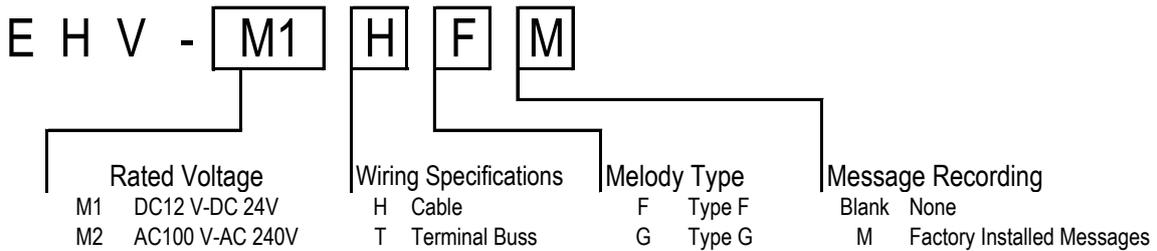

1-3. MP3 Data Specification

Playback File	MPEG1-Audio Layer III (MP3, Fs:44.1kHz)
Bit Rate	32 Kbit/s, 64 Kbit/s (Standard), 128 Kbit/s Constant Bit Rate (CBR)
Maximum Playback Time	A total of 220 seconds (calculated with one MP3 file at the standard bit rate)
Internal Memory Size	2 MByte (Management Territory is Included)
Supported Memory Card	SD Card/SDHC Card
	Recommended Parts: SDV-2GP (option)
SD Card Format	FAT 16, 32
Supported Application Software	PATLITE Playlist Editor 2
	(MP3 data rewriting, alarm/melody selection)
Remarks	MPEG Layer-3 audio coding technology licensed from Fraunhofer IIS and Thomson Licensing.

1-4. Signal Input Specification

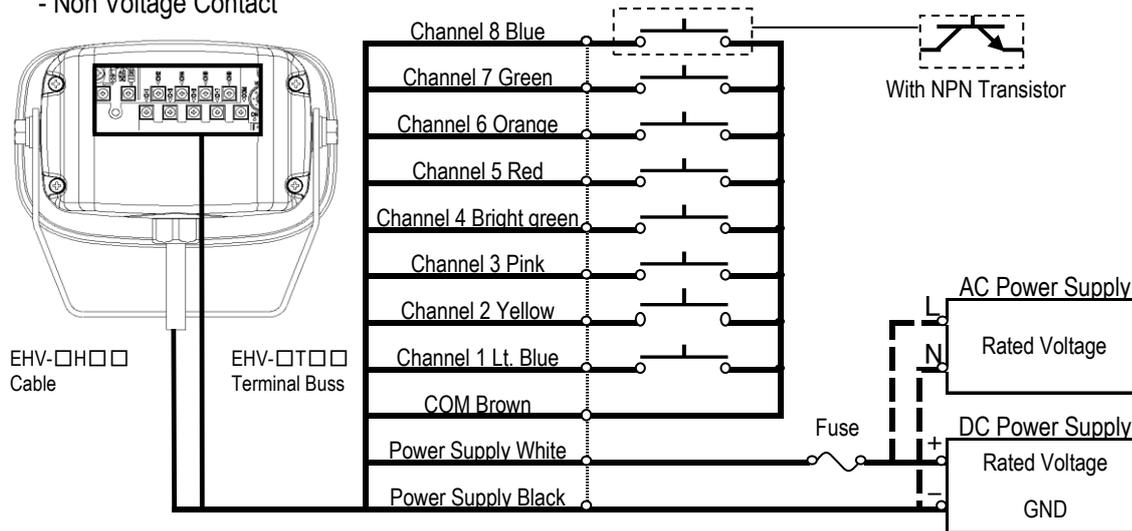

Signal Input Priority	Channel 8 > Channel 7 > Channel 6 > Channel 5 > Channel 4 > Channel 3 > Channel 2 > Channel 1 (except for a binary input)	
Contact Control Method	[EHV-M1]: Non-voltage/Voltage Contact [EHV-M2]: Non-voltage Contact	
Contact Closed-Circuit Current	12mA or less	
Contact Open-Circuit Voltage	(EHV-M1) : 6V or less (EHV-M2) : 8V or less	
Contact Input (Circuit Configuration)	<p>Non-voltage Contact</p>	<p>Voltage Contact (EHV-M1 Only)</p>
	Transistor Input (Circuit Configuration)	<p>NPN Transistor</p>

2. Model

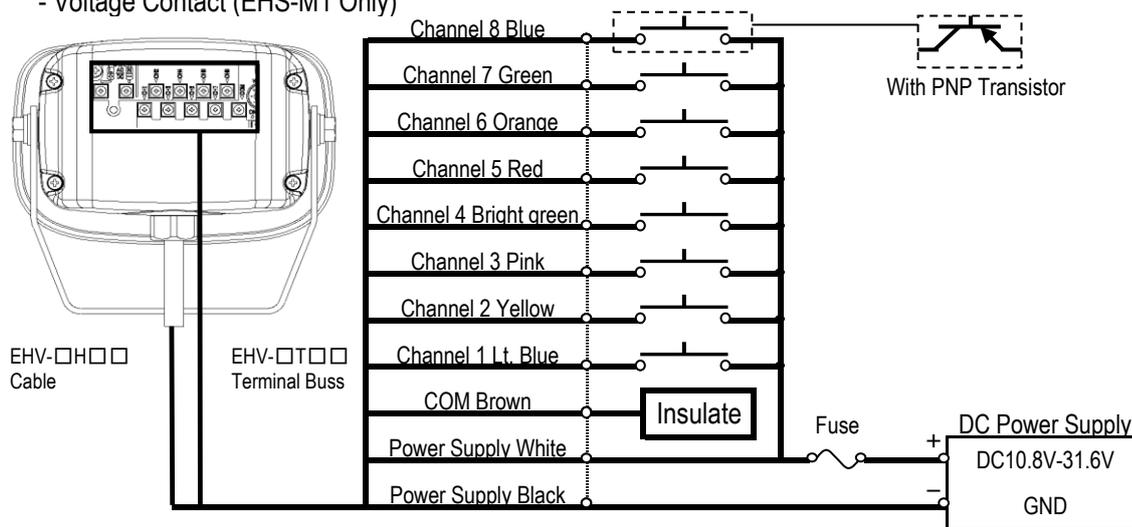

3. Wiring Diagram

- Non Voltage Contact

- Voltage Contact (EHS-M1 Only)

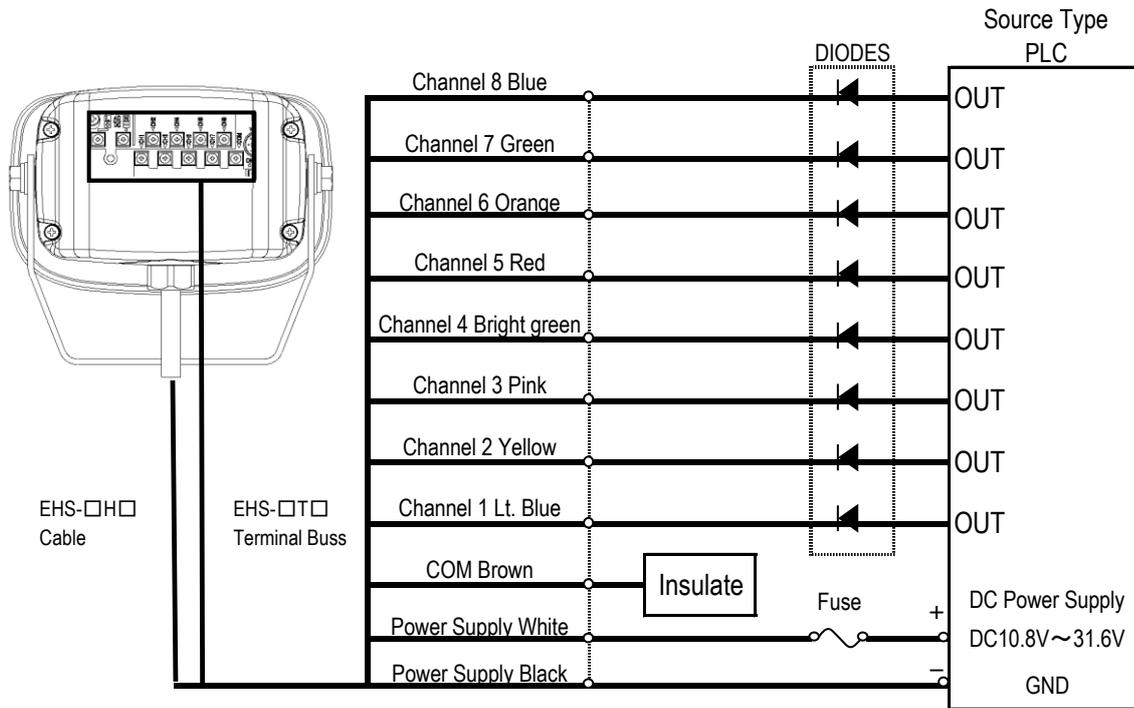

* Each channel color is indicated by the cable or lead wire.

* Voltage contact input should be in the range of DC10.8 V to DC31.6 V.

* When using the Terminal type model, round terminals with M3 insulated coating is recommended when wiring to the Terminal.

Recommended Parts: J.S.T. Manufacturing Co., Ltd. N1.25-3 (article corresponding to RoHS)

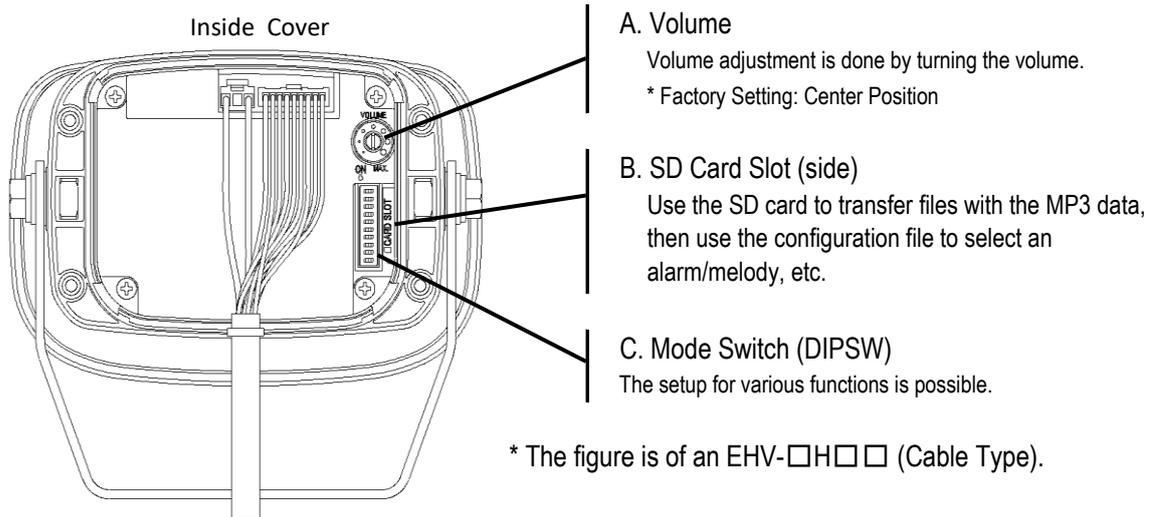

When connecting a Source-type PLC, be sure to insert a diode as indicated in the drawing below. Failure to insert a diode will lead to possible malfunction.

※Select a diode with ratings indicated below.

Forward Current	50mA or more
Reverse Voltage	50V or more

4. Part Names and Functions

Mode Switch Function Assignment

Mode Switch	(6) Forced Playback OFF	(6) Forced Playback ON
(5) MP3 Setup OFF	<p>(6) Forced Playback (5) MP3 Setup (4) Sound Mode } Open (2) Channel Input Method (1) Sound Group</p>	<p>(6) Forced Playback (5) MP3 Setup (4) Sound Mode Open (7) Tone Selection</p>

Mode Switch Function List

Function Name	Setting Index	Details
(1) Sound Group	Groups A-P	Refer to "5-1. Sound Group."
(2) Channel Input Method	Binary/Bit	Refer to "5-2. Channel Input Method."
(3) Playback Mode	Normal playback / Input priority playback / Hold playback / Memory playback	Refer to "5-3. Playback Mode."
(4) Sound Mode	Factory Mode / Public Address Mode	Refer to "5-4. Sound Mode."
(5) MP3 Setup	MP3 Setup ON/OFF	Refer to "5-5. MP3 Setup."
(6) Forced Playback	Forced Playback ON/OFF	Refer to "5-9. Forced Playback."
(7) Tone Selection	Playback Sound Selection	

5. Functionality Details

5-1. Sound Group

When "(5) MP3 setup" switch is being turned OFF, the sound group can be selected from up to 16 variations from groups A-P with the Mode Switch (DIPSW).

A sound group cannot be selected when "(2) channel input method" is set for binary.

Refer to "7. sound list" for the Mode Switch (DIPSW) and sound group combination which can be selected.

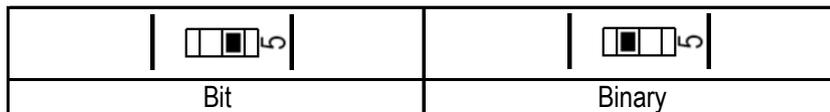

* Factory Setting: Group A

5-2. Channel Input Method

Channel input mode can be selected for bit/binary with the Mode Switch (DIPSW).

With the bit input, channels 1-8 can be used to reproduce up to eight channels.

With the binary input, channels 1-6 can be used to reproduce up to 63 channels.

*Factory Setting: EHV- ... Bit
 EHV-M ... Specified Messages Less than 8:Bit
 Specified Messages greater than 9:Binary

Binary Input Table

Sound No.	Channel								Sound No.	Channel							
	1	2	3	4	5	6	7	8		1	2	3	4	5	6	7	8
1	○								33	○

○ -- Switch ON

5-3. Playback Mode

The Mode Switch (DIPSW) can select from four different kinds of playback modes.

When "(5) MP3 setup" is OFF, the hold playback function is active, regardless of the Mode Switch position.

Normal Playback	Input Priority Playback	Hold Playback	Memory Playback

* Factory Setting : Normal Playback

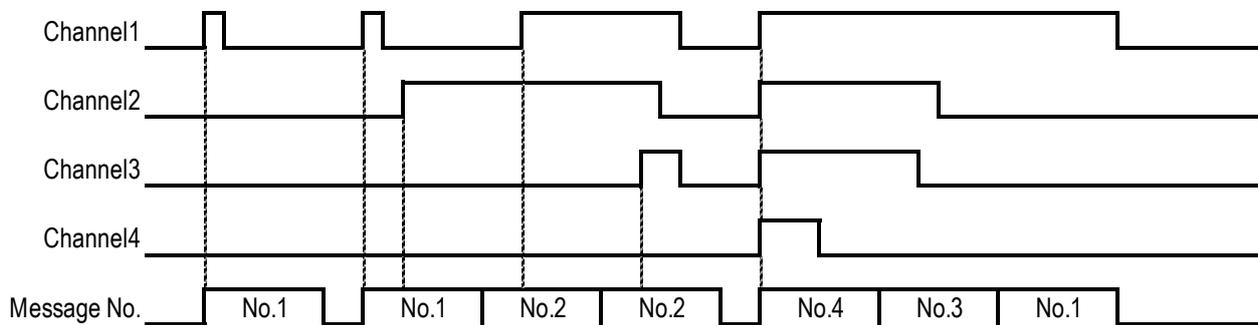

- Normal Playback

If a signal input (Playback) is a pulse input, playback is ended as soon as the pulse input is off.

The signal input (Playback) is maintained only when the input is held on.

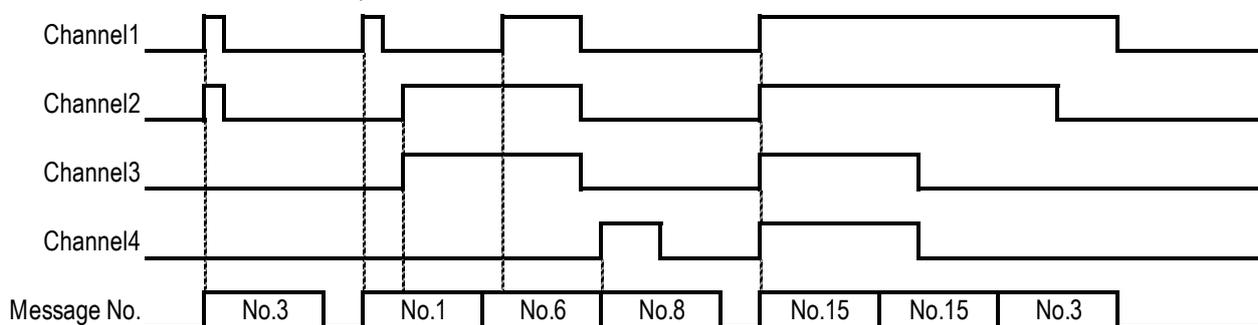

The signal input (Playback) becomes invalid during playback.

- Channel Input Method : Bit Input

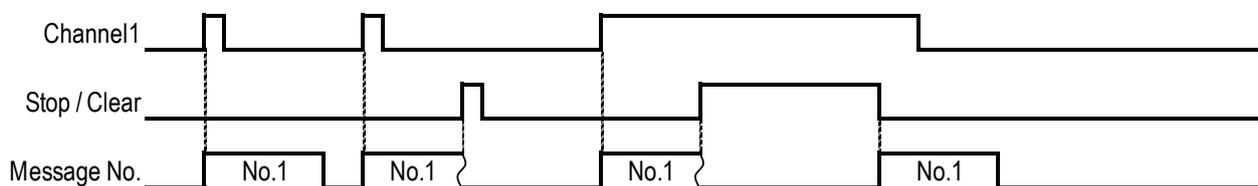

*All channels above 5 are the same

- Channel Input Method : Binary Input

*All channels above 5 are the same

- During a Stop/Clear Input

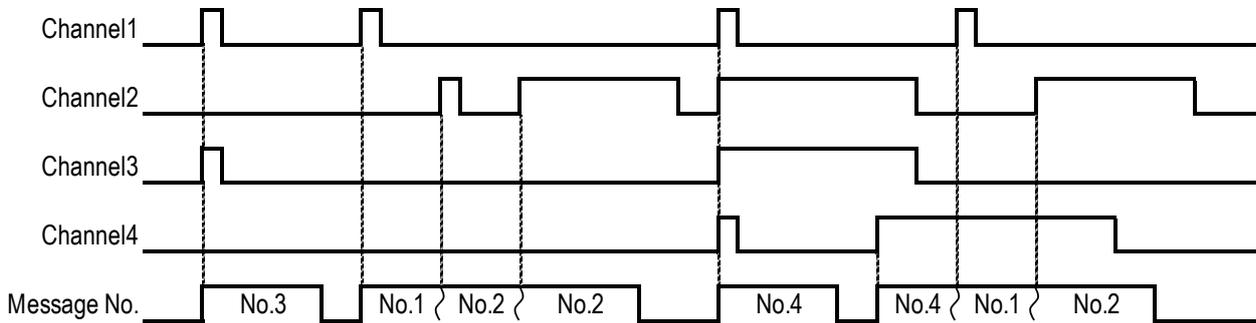

• The wavy line indicates when playback is stopped.

- Input Priority Playback

When a signal input (Playback) is on during playback, the playback is stopped and the channel from the signal input (Playback) is reproduced.

If the signal input (Playback) is a pulse input, even with the input held, playback plays only once.

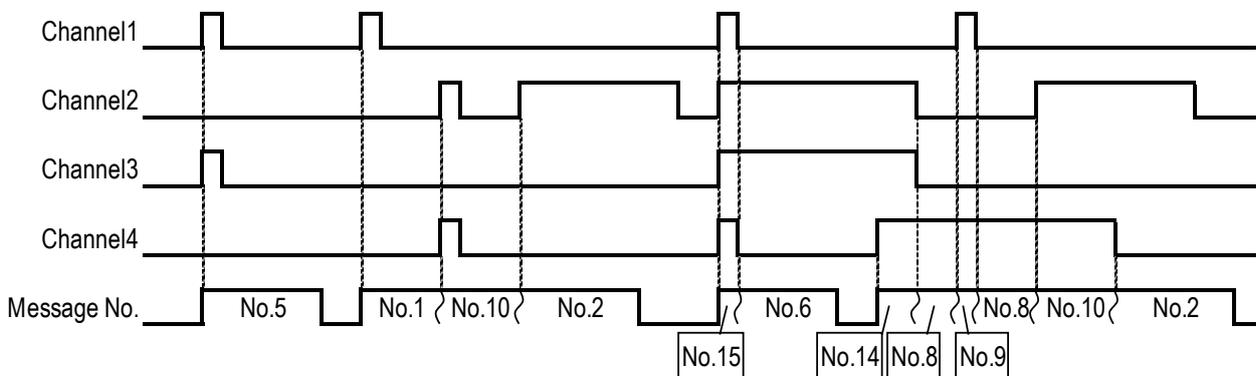

- Channel Input Method : Bit Input

* All channels above 5 are the same

* The wavy line indicates when playback was stopped and the message No. which was the priority signal input (Playback) is played.

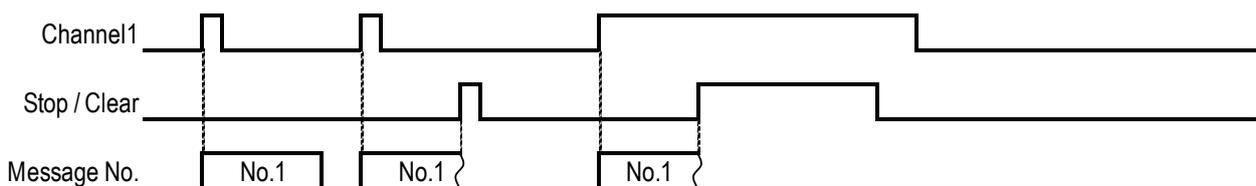

- Channel Input Method : Binary Input

* All channels above 5 are the same

* The wavy line indicates when playback was stopped and the message No. which was the priority signal input (Playback) is played.

- During a Stop / Clear Input

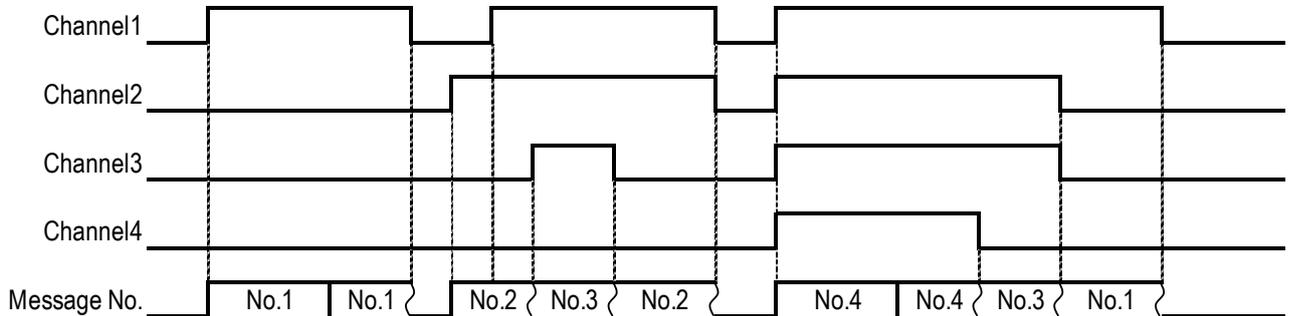

* The wavy line indicates when playback is stopped.

- Hold Playback

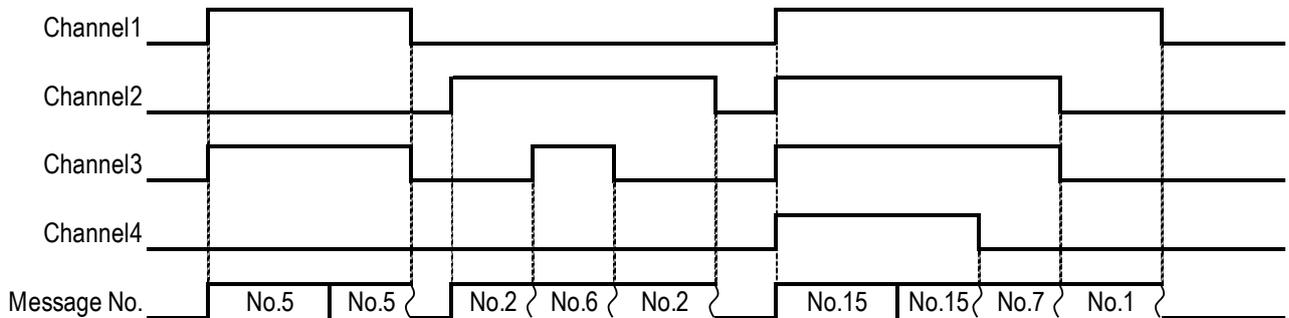

It only plays back while the signal input (Playback) is maintained.
 Playback is stopped when the signal input (Playback) is removed.
 Repeated playback is done by maintaining a signal input (Playback).
 It does not play back if a signal input (Playback) is a pulse input.

- Channel Input Method : Bit Input

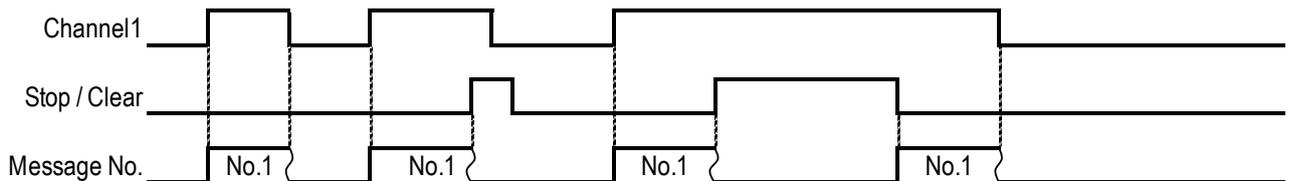

* All channels above 5 are the same
 * The wavy line indicates when playback was stopped and the message No. which was the changed signal input (Playback) is played.

- Channel Input Method : Binary Input

* All channels above 5 are the same
 * The wavy line indicates when playback was stopped and the message No. which was the changed signal input (Playback) is played.

- During a Stop / Clear Input

* The wavy line indicates when playback is stopped.

- Memory Playback

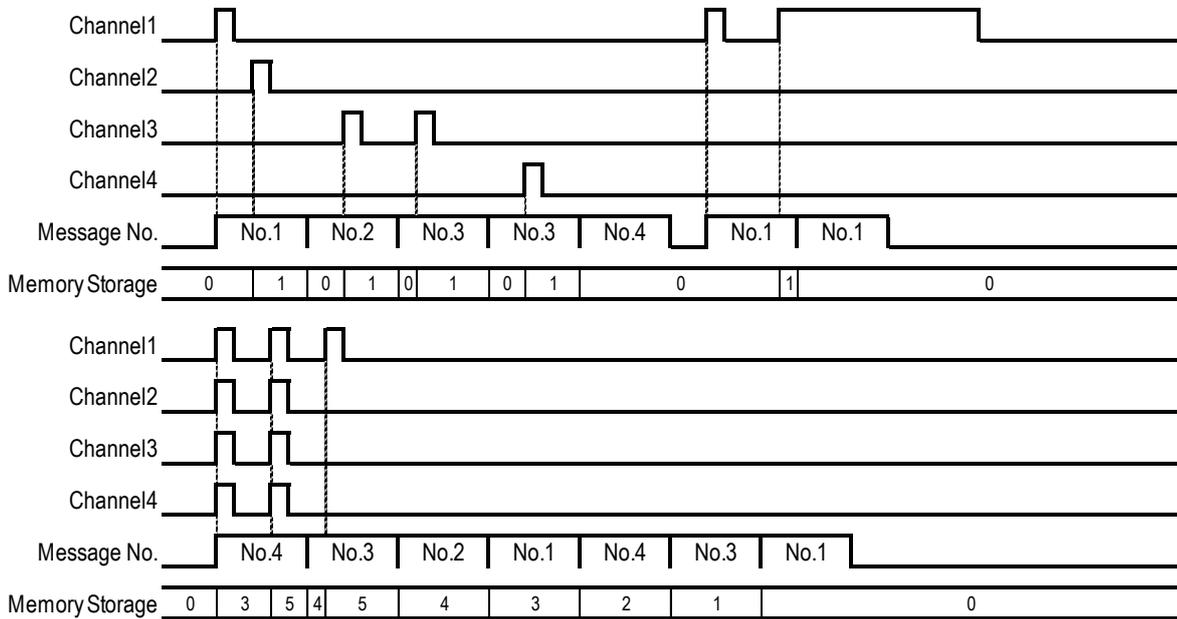

When several signal inputs (Playback) are entered during playback, the memory of up to 5 signal inputs will play the corresponding message No.

Signal inputs beyond the memory capacity is ignored.

When playback is ended, the next available channel stored in memory will play.

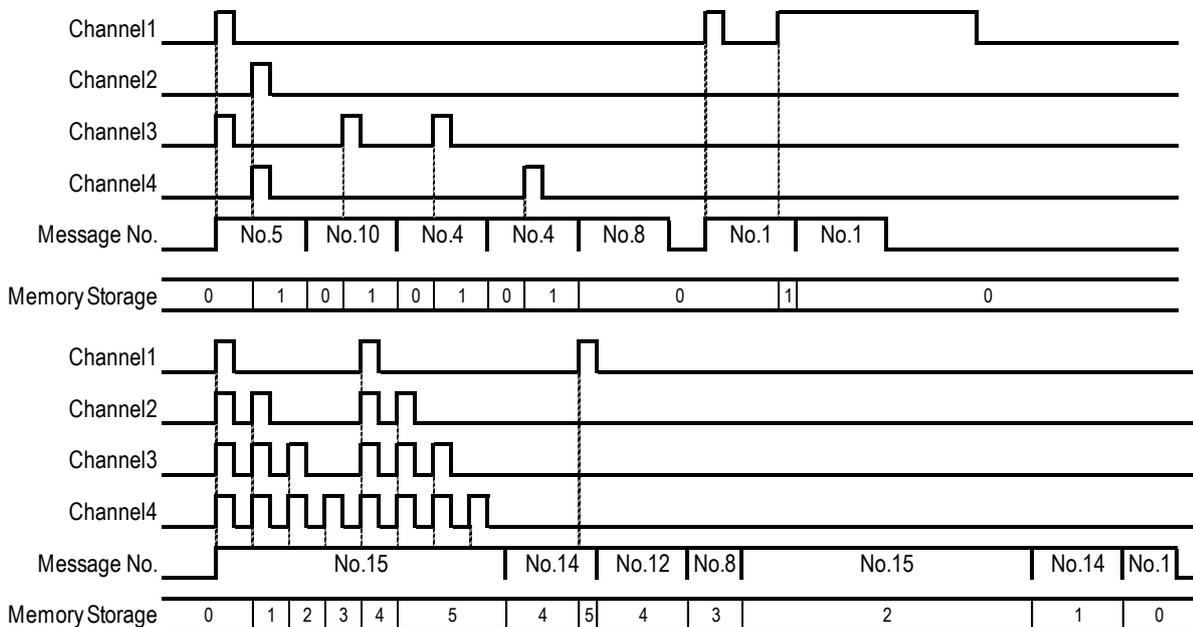

If the signal input (Playback) is a pulse input, even with the input held, the next message in memory is played back only once.

- Channel Input Method : Bit Input

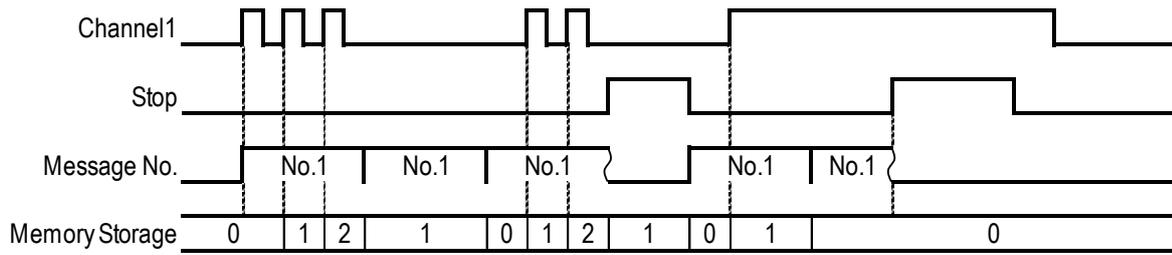

* All channels above 5 are the same

- Channel Input Method : Binary Input

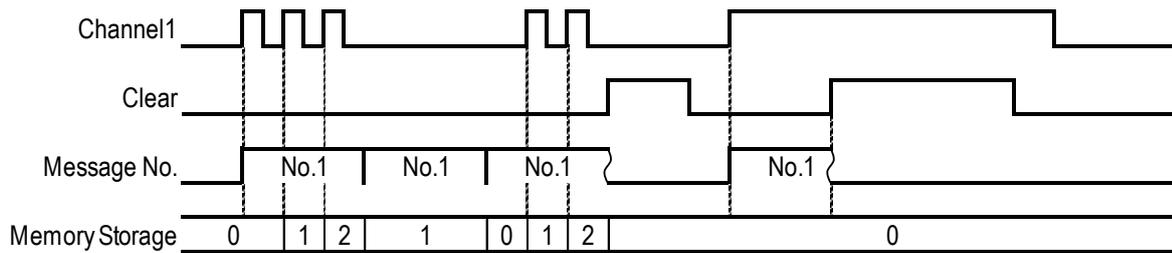

* All channels above 5 are the same

- During a Stop input

* The wavy line indicates when playback is stopped.

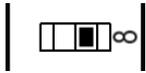

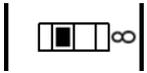

- During a Clear input

* The wavy line indicates when playback is stopped.

5-4.Sound Mode

The alarm/melody audibility reproduction can be selected with the Mode Switch (DIPSW).

	
"Factory Mode"	"Public Address Mode"

- Factory Mode -- The audible sound is suitable as a warning alarm.
- PA Mode -- The audible sound is suitable for public announcements.

* Factory Setting: "Factory Mode"

5-5.MP3 Set up

The MP3 can be selected for ON/OFF with the Mode Switch (DIPSW).

	
MP3 setting OFF	MP3 setting ON

- MP3 setup ON ... MP3 data + Alarm/Melody
 - MP3 data and alarm/melody data can be freely combined.
 - MP3 data can be freely written, using an SD card.
 - An alarm/melody can be selected from the built-in sounds.
 - Registration of MP3 data, and a select and registration of an alarm melody are exclusive software (PATLITE Playlist Editor 2). It carries out by using it.
 - Playback modes can be selected.
- MP3 setup OFF ... Alarm/Melody
 - The alarm/melody can be selected among the built-in sounds.
 - The 63 sounds are divided and registered into 16 kind of groups.
 - A sound group is selected with the Mode Switch (DIPSW).
 - The Playback mode is made into the hold playback mode.

* Factory Setting : EHV-□□□ ... MP3 setup OFF
 EHV-□□□M ... MP3 setup ON

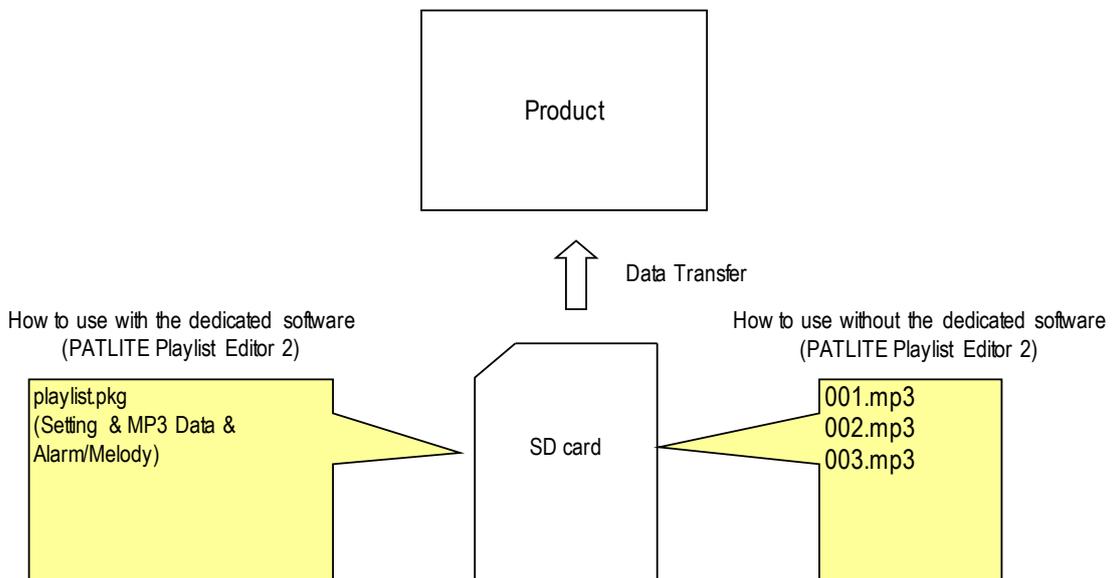

5-6. MP3 Data Rewriting

With the optional SD Card, MP3 data can be freely rewritten.

Rewriting MP3 data requires the use of dedicated software (PATLITE Playlist Editor 2) and designating a regular file name.

The built-in alarm/melodysounds are not overwritten.

Item	When the dedicated software (PATLITE Playlist Editor 2) is used	When the dedicated software (PATLITE Playlist Editor 2) is used
Playback message No. The number of MP3 data per one	A maximum of 16 data files (It is combined freely and can playback in order)	One piece of data
Individual MP3 data settings are made	When setting up sound volume, end of playback blank-time, and Repeat Playback.	Cannot set up manually.
Channel Assignment Function	When setting up to choose "playback", "sound reduction", "stop", and "clear".	All are assigned for "playback".

Recommended SD Card: SDV-2GP (option)

Drawing No.	Rev.	Page
EHV-W18	H	15/19

5-7. Channel function (Function Which Uses Exclusive Soft "PATLITE Playlist Editor 2")

Dedicated software (PATLITE Playlist Editor 2) can be used to assign functions to each signal input. In order for the channel function assignments to be used, the setup data has to be transmitted to the product via the SD Card.

If the MP3 setup mode is OFF, this function becomes invalid.

- Playback
The corresponding channels are played back.
- Sound Reduction
The volume of sound being played back is decreased.
A maximum of two sound reduction channels can be assigned.
When two sound reduction values are set up, three sound reduction levels can be made.
- Stop
The channel during playback is stopped.
In the Memory Playback Mode, playback is stopped and the next channel in memory is played next.
A playback input is ignored during a STOP input.
- Clear
In the memory playback mode, all channels in memory is erased when an input occurs.
In other playback modes outside memory playback, the same operation as the stop function occurs.

If simultaneous inputs for CLR and STOP occurs, priority is given to the CLR input. When channels are assigned for sound reduction, STOP, and CLR, the available number of playback channels decrease.

Example: For a maximum number of bit inputs;

```
channel1 - channel5      => playback
channel6                 => sound reduction
channel7                 => stop
channel8                 => clearance
```

In this case, the available number of playback channels is set to five.

* Factory Setting : channels 1-8 are all set as "Playback".

5-8. Sound Reduction

- (6) When Forced Playback is OFF (the function which uses exclusive soft "PATLITE Playlist Editor 2")
Using the dedicated software (PATLITE Playlist Editor 2), If a signal input is assigned with the sound reduction function, the sound level of the message being played back will be reduced.
(Refer to "5-7. Channel Assignment Function")

The input state for sound reduction 1 and sound reduction 2 can be set up for three steps in sound reduction. (-10dB, -20dB, -30dB)

In order for the sound reduction function to be used, the setup data to assign the channel has to be transmitted to the product via an SD card.

Sound Reduction 1	With no input	With an input	With no input	With an input
Sound Reduction 2	With no input	With no input	With an input	With an input
Sound Reduction Level	No Sound Reduction	-10dB	-20dB	-30dB

* Factory Setting: Sound Reduction Function OFF

- (6) Forced Playback ON

With a Forced Playback, if a signal line input occurs, the playback sound can be reduced.

The sound reduction level can be selected by the channel input.

Priority rank is channel3>channel2>channel1.

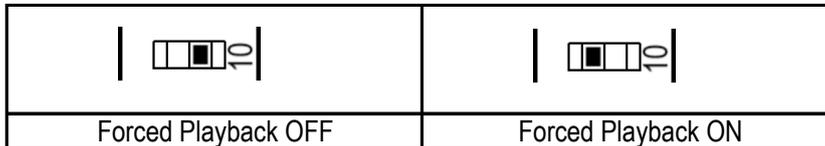

Signal Input Condition	Sound Reduction Volume
None	No Sound Reduction
Channel1	-10dB
Channel2	-20dB
Channel3	-30dB

5-9. Forced Playback

When the Forced Playback mode is turned ON, it will play back after power is supplied, even with no signal input. It can be used for testing the playback volume or when controlled by power supply start-up. The Forced Playback is selected for ON/OFF with the Mode Switch (DIPSW). The sound (channel) to play back can be selected by the Mode Switch (DIPSW).

MP3 setting ON : MP3 data and alarm/melody is selected with Mode Switch Numbers 1 - 6.

MP3 setting OFF : Built-in Sounds are selected with Mode Switch Numbers 1 - 6.

* Factory Setting: Forced Playback OFF
