* The screen above is only an image (conditions may vary with setup parameters).

① Color Setup (Maximum of 21)

A favorite color can be selected from a 21-color palette.

② Signal Tower Setup Features

With a maximum of 15 groups*, 63 series of operations can be registered to perform an operation setup as one group.
* A single display type can register a maximum of 31 groups.

③ Operations (Maximum of 63)

Operation setup is easy. Select the desired color (21 colors), flashing period (if any), and length of time the light and alarm are on* (maximum of 3,600 seconds, (11 sounds). * Limited to Time Trigger and Pulse Trigger.

● Various Setups

○ Group setup (Detailed Settings)
 • Flash Reduction Setup
 • Time Span (0.1 sec./1.0 sec.)
 • Repetitive Lighting Setup

○ Sign pattern generation (9 colors)
 Setup a gentle way to "shine like a firefly."
 - Color select: Cycle Speed (Low/High)

○ Simulation
 Check the light pattern by previewing it before transmitting data into the unit.

○ System Transmit and Receive
 Data can be written into the unit and also read from it, so that patterns can be easily copied into other units.

* Data transfer is also possible when the main unit is OFF and the system's power source is the USB bus power.

■ "Smart Mode" for use with various ideas

Elapsed Time / Countdown / Cycle Time

Setup timing in pattern changes with the editing software.

1. Time-trigger Type

Setups for "individual group" operation can be executed.   Pattern change timing can be setup with the editing software.

Maximum pattern display	63 Patterns
Maximum group number	15 Groups

No.1	No.2	No.3
Contact Input	Automatic	Automatic
10 min. progress	30 min. progress	50 min. progress

Determine thresholds for pressure/temperature, etc.

Pattern transition timing can be controlled by individual discrete inputs.

2. Pulse-trigger Type

Transitions from one pattern to another can be triggered by setting elapsed time or by individual discrete inputs.

Maximum pattern display	63 Patterns
Maximum group number	15 Groups

No.1	No.2	No.3
Contact Input	Contact Input	Contact Input
Level 1	Level 2	Level 3

Error level/Request Priority/Status Display, etc.

Inputs 1-5, with ON/OFF signal combinations, is made to operate.

3. Single-display Type

The product memory operates for "individual group" functions.

Maximum pattern display	—
Maximum group number	31 Groups

Group 1	Group 2	Group 3
Contact Input	Contact Input	Contact Input

■ "Signal Tower" mode is used like a conventional Signal Tower
